Unique design provides greater stability and alignment

- Cages, suspension rods, and stands provide **superior suspension and better alignment from end to end.**
- **Leg stands are screwed together**, not merely clipped together. Cage-to-stand mounting on tabs is built into the leg stands.
- Every cage bank is attached to the feed trough, which acts as an I-beam to provide **superior strength, alignment, and stability.**

Big Dutchman wire makes cages sturdy and long-lasting

- Cages are made of **quality welded wire fabric**, made by Big Dutchman.
- **All wire components are double-galvanized with a protective zinc coating** bonded over every wire and joint.

Stands are eight feet (2.5 m) apart

- **Stands are eight feet apart**, reducing the number of leg stands required.

Different needs, different sizes

- **24" (61 cm) wide cages** for start/grow and **32" (81 cm) wide cages** for grow-only. All cages are 15" (38 cm) tall.

The proven Champion[™] Chain Feeding System provides better feed conversions and less mortality

- **Big Dutchman's proven Champion chain feeder** accurately measures feed throughout the grow-out cycle and provides easy access to feed.
- **The patented half-in, half-out feed trough provides improved access:** day-olds can easily get to feed, and the manager can easily access the feed chain from outside of the cage. The hinged grille is raised only once to allow additional access for growing birds.
- The **feed chain** provides uniform feed distribution.
- Available independent drives and hoppers lengthen the life of the feeder.
