DryExactPro

Sophisticated precision multi-phase feeding

DryExactPro

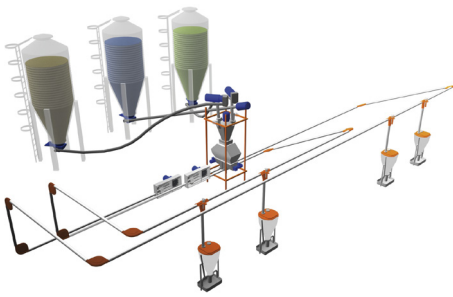

**Precision feeding
for better feed
efficiency and
reduced feed
costs.**

DryExactPro is a computer controlled feeding system that allows producers to have full control over every aspect of their pigs feed.

Feed is delivered into the feed kitchen via the DryRapid conveying system, where a weighted batch mixer is employed to blend and deliver individual feed recipes to every feed valve (trough or feeder).

This technology along with the capability of feeding two loops simultaneously with highest accuracy opens the door to sophisticated precision multi-phase feeding for growers and finishers.

FEATURES AND ADVANTAGES

- Designed for easy multi-phase feeding, so you can adjust diets daily to improve feed conversion, reduce feed costs and improve carcass quality
- All diets are automatically and precisely adjusted at each feeding time
- Individual diets are mixed for each feed valve, so each trough or feeder can have a different feed recipe and can be distributed simultaneously
- Easy blending of two or more feeds or multiple feed components, premixes or special feed additives
- Weighted batch mixer to ensures high accuracy and homogenous feed
- Allows for sensor controlled feeding which helps limit feed waste and improves feed management
- Mixes and delivers feed rations as small as 18 oz. to allow for testing individual feed and diets
- Ideal management tool for any research and testing set-up in both breeding and nurse/finisher barns
- Managed with 510Pro production controller for high performance and full connectedness between all applications
- Integrates with **BIGFARMNET** farm management software for convenient and remote data sharing and analysis

CONTROL & SOFTWARE

- 510Pro production controller comes standard
- Power module with customized system control panel
- 6 circuits, including sub-circuits – up to 2 circuits feed simultaneously
- 405 valves, 32 feed components, 150 feeding times, 4 light outputs and 8 feeding time tables
- Up to 4 small quantity dosing units (e.g. medications, minerals)
- 4 switching programs (light, external augers) with 10 switches each
- **BIGFARMNET** software links all controls, farm computers and mobile devices together
